Social ties and health: The benefits of social integration

Social ties and health: The benefits of social integration

TE Seeman - Annals of epidemiology, 1996 - Elsevier

This article explores the relationship between level of social integration and various aspects of health. A search of the literature published since the mid-1970s (under the MEDLINE key words,"social ties","social network","social isolation","social environment") presented strong evidence that social integration leads to reduced mortality risks, and to a better state of mental health. The evidence on physical health outcomes is less conclusive. There is no consistent evidence that social integration affects the incidence of disease (at least for ...

Energy Research; Reports Summarize Energy Research Study Results from Hong Kong Polytechnic University (Combined thermal and daylight analysis of a typical public rental housing development to fulfil green building guidance in Hong Kong)

411 words
25 December 2015
Energy Weekly News
ENRGWK
542
English
© Copyright 2015 Energy Weekly News via VerticalNews.com

2016 JAN 1 (VerticalNews) -- By a News Reporter-Staff News Editor at Energy Weekly News -- Investigators discuss new findings in Energy Research. According to news reporting originating from Hong Kong, People's Republic of China, by VerticalNews correspondents, research stated, "This paper presents a combined daylight, airflow network and building energy simulation of a Public Rental Housing (PRH) development in Hong Kong to fulfil the requirement of the local green building guidance. The numerical modelling results are partly validated by on-site measurements during the period with the highest monthly average outdoor temperature."

Our news editors obtained a quote from the research from Hong Kong Polytechnic University, "Different ventilation control strategies are simulated to optimize natural ventilation performance. The simulation results show that the full-day ventilation strategy contributes to a lower average and peak indoor temperatures compared to the non-ventilation and night-ventilation scenarios. The indoor operative temperature of a worst-case vacant flat lies under the upper 80% acceptability limits in ASHRAE 55 during 67.5% of the modelled period in July. On the other side, at least 95.6% of the habitable area in the case buildings is predicted to experience a higher average daylight factor of 1% compared with the local green building guidance."

According to the news editors, the research concluded: "Furthermore, the energy saving potential of the combined natural ventilation and daylight strategies is anticipated to be 51.9% for air-conditioning and 8.3% for lighting compared to a baseline building, respectively."

Troubleshooting

Q: Can I search for everything that are available in the databases subscribed by the library?

A: FIND@HKUL is a tool for **discovering indexed information, it does not guarantee access to all full text articles retrieved**.

In fact, full text accessibility depends on a number of contributing factors such as subscription coverage, source of the article, and occasional changes to the subscription platform and configuration on the vendor’s side.

In many cases, the external changes are beyond the Libraries’ knowledge and control.

How to Counter Fake News? A Taxonomy of Anti-fake News Approaches

ALEMANNO, Alberto. **European Journal of Risk Regulation : EJRR; Berlin** Vol. 9, Iss. 1, (Mar 2018): 1-5. DOI:10.1017/err.2018.12

Abstract

Abstract (summary) provides a short summary of the article

Fake news is a symptom of deeper structural problems in our societies and media environments. To counter it, policymakers need to take into account the underlying, self-reinforcing mechanisms that make this old phenomenon so pervasive today. Only by taking a step back can we examine the vulnerabilities these fake news narratives exploit. This article provides a first taxonomy of anti-fake news approaches. It argues that proposed anti-fake news laws focus on the trees rather than the forest. As such, they will not only remain irrelevant but also aggravate the root causes fuelling the fake news phenomenon.

Abstract

Alarmed by the oversimplifications related to the ‘fake news’ buzzword, researchers have started to unpack the concept, defining diverse types and forms of misleading news. Most of the existing works in the area consider crucial the intent of the content creator in order to differentiate among different types of problematic information. This article argues for a change of perspective that, by leveraging the conceptual framework of sociocybernetics, shifts from exclusive attention to
